

North Carolina Aerospace (NC Aero) is an organization of community and industry leaders designed to promote, expand and strengthen the aerospace sector throughout the state. Aerospace is a high-growth industry with great potential to be an economic engine bringing high-paying jobs and related businesses to North Carolina.

Already, our region and state are home to aircraft manufacturers, airplane component manufacturers, repair and maintenance organizations, and a major air cargo hub. Companies such as Honda Aircraft Company, Triumph Actuation, BE Aerospace, Purolator, Cessna and TIMCO have chosen to locate and thrive in North Carolina. With more than 200 aviation-related companies thriving in the state, we are well positioned to attract even more.

Through its advisory board, NC Aerospace makes connections among public, private and educational entities to ensure that the needs of business match up with the capacity of our communities. Our top three goals are to market the state as an optimal location for success and growth; to educate and develop a skilled, specialized talent base for aviation; and to support this competitive industry with innovative approaches to operations and technology.
